## **Behavioural Management of Safety**

BMOS integrates behavioural strategies and processes into health and safety management systems.

Working at all levels of an organisation, BMOS analysis promotes safer behaviour and environmental conditions to deliver continuous improvement in health, safety and business performance.

# BMOS

BEHAVIOURAL MANAGEMENT OF SAFETY, UTILISIES APPLIED BEHAVIOURAL SCIENCE IN THE MANAGEMENT OF HEALTH AND SAFETY.

A BMOS programme within an organisation creates a systematic approach that defines a set of behaviours to reduce the risk of work-related injuries. It achieves this by collecting data on the frequency of safety critical behaviours, providing feedback and reinforcement to encourage positive behaviour. The data is also used to identify root causes, facilitate problem-solving, and develop recommendations for continuous improvement.

We have successfully implemented BMOS programmes for a wide range of clients including BG-Group, BAA, British Land and Royal Bank of Scotland to:

- Engage the workforce to make contributions and recommendations towards continuous health and safety improvement.
- Create an environment where the workforce is encouraged to repeat behaviour, to support the business and prevent loss.
- Improve communication between management and the workforce addressing root causes and working towards permanent solutions to removing unsafe practices.
- Raising general awareness to health and safety and providing training and interpersonal skills to proactively manage health and safety at all levels.
- Tracking behavioural data and looking at leading indicators of unsafe practices and dealing with the issues before an accident happens.

## WHAT WE CAN DELIVER:

Individual packages to suit the needs of your company including workforce led programmes, management led programmes or combinations of the two. The process is a tailored behavioural based system to match the safety culture within your company, budget and available manpower.

One of our most recent petrochemical BMOS clients produced exceptional performance with zero lost time injuries within the Mace team and supply chain. The client was so pleased with the results of the BMOS programme that they invited the project manager to deliver a presentation on Behavioural Safety to an audience of senior staff from around the world, as well as leading behavioural safety consultants from the US and beyond.
